EDUCATION

Degree	Specialization	Institute	Year	CPI
B.Tech	Data Science & Artificial Intelligence	IIT Guwahati	2024-Present	5.17
HSC	State Board – Senior Secondary	New Vision Jr. College	2023	9.62
SSC	-	New Vision School	2021	10.0

TECHNICAL SKILLS

- **Languages:** Python, C++, JavaScript, SQL
- **AI & LLMs:** Prompt Engineering, LLM APIs (Groq), Structured Outputs, Pydantic, JSON Validation, Information Extraction
- **Backend & APIs:** Node.js, Express.js, RESTful API Design, PHP, JWT Authentication
- **Databases:** MySQL, Database Schema Design
- **Tools:** Git, GitHub, Postman, Linux
- **Core CS:** Data Structures & Algorithms, DBMS, Operating Systems

PROJECTS

- **LLM-Powered Email Operations Assistant** [Python, Groq API, Pydantic, JSON] [GitHub](#)
 - Built an **AI-powered email analysis pipeline** using **Groq LLM API** to perform **information extraction** from unstructured business emails into **schema-validated structured outputs**
 - Designed **prompt engineering workflows** with **Pydantic-based validation** to ensure reliable, consistent, and **verifiable JSON outputs** containing sender, category, priority, sentiment, deadlines, and action items
 - Developed **batch analytics** classifying **100+ emails across 8 business categories**, generating insights on category distribution, priority levels, and sentiment trends using modular Python components
- **CardioDetect: Deep Learning and Hybrid ML Pipeline** [PyTorch, CNN, SVM, Naive Bayes] [GitHub](#)
[AI Course Project under Prof. Teena Sharma]
 - Developed a **custom 3-block CNN** in PyTorch using **Batch Normalization, LeakyReLU, and Dropout** to classify ECG images into **4 cardiac conditions** (MI, H.MI, AH, and Normal), achieving **97.31% accuracy**
 - Built a **hybrid deep learning pipeline** by extracting CNN feature embeddings and training **SVM and Naive Bayes** classifiers, with the best-performing **CNN+SVM** model achieving **98.39% accuracy**
 - Leveraged the CNN as a **feature extractor** to generate **512-dimensional embeddings** from ECG images, integrating deep representations with traditional ML classifiers for enhanced classification performance
- **Campus Placement Analytics Portal** [PHP (REST APIs), MySQL, JavaScript, Chart.js] [Live Demo](#) | [GitHub](#)
[DBMS Course Project under Prof. Debanga Raj Neog]
 - Designed a **normalized relational database (8 tables)** in MySQL modeling **5 years of placement data** across **15+ IITs**, with optimized schema supporting multi-dimensional querying
 - Built a **RESTful PHP backend** with **parameterized PDO queries** – eliminating SQL injection risks and **improving query performance by 40%** – with filtering by institute, year, branch, and sector
 - Implemented **dynamic visualizations** (Bar, Stacked Area, Heatmap, Treemap) via Chart.js delivering **12 actionable insights**; integrated **DataTables.js** for real-time client-side filtering across **500+ records**

RELEVANT COURSEWORK

Data Structures & Algorithms (Theory+Lab), DBMS (Theory+Lab), Introduction to Data Science, Introduction to Artificial Intelligence, Python Programming (Lab), Statistical Foundations of Data Science, Discrete Mathematics

POSITIONS OF RESPONSIBILITY

- **Associate, PR & Branding** [Alcheringa – IIT Guwahati] Apr 2026-Present
 - Supervised ideation, planning, and **end-to-end execution of ~50 competitions** across India as part of one of the **largest cultural festivals in Northeast India**
 - Managed **10,000+ participants**, coordinating logistics, outreach, and on-ground operations through the Public Relations and Branding team
- **Associate, Spirit Sports Festival** [IIT Guwahati] Sept-Oct 2024
 - Coordinated logistics and on-ground execution for multiple events at IIT Guwahati’s annual sports festival
